 - 3) Paging & Sorting ,Fillter, Specification,Validation, Internationalization ,Login, Resigter,Exception,Change Password
 - 4) Technology used: Spring boot,My SQL, Hibernate, Postman, Git
- Link Git : <https://github.com/haiph1210/Department-Manager-Exam.git>

Job Position :Java Developer Backend

- Description of the project: Write a server for YangKang shop
 - Mission: Do both Backend (using java Spring to create server), API testing via Postman and up to GIT
 - Applications include: Manage Accounts, Products and Categories
 - Number of members: 1
 - 1) Login (Spring security: JWT)
 - 2) CRUD for Product,Account, Category
 - 3) Paging & Sorting ,Fillter, Specification,Validation, Internationalization ,Login, Resigter,Exception,Change Password
 - 4)Send mail(create new Account, send mail acctive and update account send mail acctive)
 - 5) Upload Image
 - 6) Technology used: Spring boot,My SQL, Hibernate, Postman, Git
- Link Git:<https://github.com/haiph1210/YangKang.git>

Job Position :Java Developer Backend

- Description of the project: Actual project when doing internship at Vissoft company
- Mission: Do both Backend (using java Spring to create server), API testing via Postman and up to GIT
- Project: Microservice
- **Applications include: AccountingDay**
- Number of members: 4
- Draw sequence diagram
- Design API
- 1. Get data from Timekeeper and save to TimeSheeting table
- 2. Import File Excel ,timekeeping with management rights
- 3.CRUD Compensating timekeeping , Receiving invalid data from the timesheet will send an email to the employees who have an invalid date and then the employee will manually enter the timekeeping,Prjoect Manager approved then the record will be valid and save to TimeSheeting Table, Refuse will be Invalid.
- 4.CRUD LogOT for employees to register overtime, project manager approved is a reasonable record otherwise refused
- 5.Log Time-Off
- 6. Summarize from TimeSheeting table to bring data to Month table
- 7.Deployed with Docker
- 8. Connect API with Angular
- 9. Technology used: Spring boot,MariaDb, Hibernate, Postman, Git, Spring cloud,Docker,FTP

Job Position :FullStack

- Description of the project: Use microservices to manage restaurants
- Mission: Do both Backend (using java Spring to create server), API testing via Postman and up to GIT, Frontend(Using HTML CSS JS JQuery,Bootstrap)
- Project: using Microservice
- **Applications include: eureka,api gateway,auth-service,menu-service,user-service,employee-serivice,restaurant-service,email-service,common**
- Number of members: 1
- Draw sequence diagram
- Design API
- 1. CRUD
- 2. Create new User or update User send mail active with personCode
- 3. Rest API
- 4. Import File Excel for Timekeeping
- 5. Create New Order, admin approved or refuse and send mail to customer
- 6. Create Payment count TotalPrice and Count amount returned to the customer
- 7. Summarize bills and calculate revenue by day by month
- 8. Connect API with JQuery and Ajax
- 9.Deployed to Docker
- 10. Technology used: Spring boot,MySQL, Hibernate, Postman, Git, Spring cloud,Docker,Stoplight,Draw.io.

Office information: - Proficient in using Word, Excel and Power Point tools
-Adobe: Photoshop

English: - Reading comprehension
- Basic communication

Database: - SQL, My SQL ,Join, Function, Procedure, Trigger, View,CTE

Backend: - Strong knowledge of Java core (OOP, Maven, JDBC)
- Spring core, Spring Dev Tool, Spring Web, Spring Boot, Hibernate, Spring Data JPA, Spring Security (Basic Auth, JWT), Spring Cloud
- Paging & Sorting ,Filter, Specification, Validation, Internationalization ,Login, Register, Exception, Change Password
- Postman- APIs, RESTful APIs, Web Services
- Design pattern: 3-tier model, SOLID, DI, IoC, AdapterPattern, CompositePattern,...
- Microservice
- IDEs: Eclipse, Netbeans, Spring Tool Suite, IntelliJ

Front-end: - HTML/ CSS/ JAVASCRIPT, JQuery, Ajax, Bootstrap
- IDE: Visual Code

IDE: - SQL Workbench, SQL Server Management Studio, Eclipse, IntelliJ, Spring Tool Suite, Visual Studio
Code, Visual Studio, Unity 3D, NetBeans
